

Entity Discovery and Type Induction Example

Input Text

Sentence: “Transformer was introduced by Vaswani et al. in 2017.”

Possible Discovered Entities

- Transformer
- Vaswani
- 2017

Possible Induced Types

Entity	Possible Type	Interpretation
Transformer	model / architecture	a technical method or system
Vaswani	researcher	a person name
2017	year / date	a temporal expression

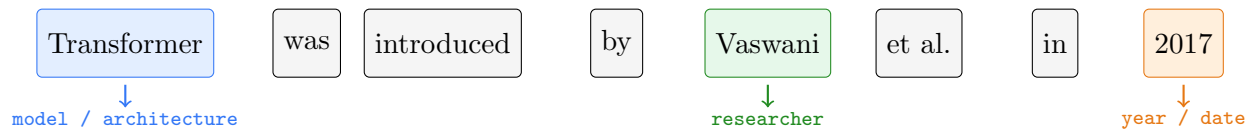

Inline Visualization

Transformer → model / architecture

Vaswani → researcher

2017 → year / date

Sentence-Level Visualization

Compact Thesis-Friendly Version

For example, given the sentence “Transformer was introduced by Vaswani et al. in 2017,” an entity discovery module may identify *Transformer*, *Vaswani*, and *2017* as salient spans. A type induction module may then assign them the semantic types `model / architecture`, `researcher`, and `year / date`, respectively.
